

Healthcare Data Analytics Project

Bhumika Saxena
Healthcare Data Analyst

Business Problem

Cancer remains one of the leading causes of death in the United States.

Healthcare organizations and public health agencies need interactive visualizations to identify:

- Trends in cancer incidence
- Geographic mortality differences
- Survival disparities
- Demographic risk factors

Objective

Build an interactive Tableau dashboard to help decision makers explore cancer statistics and support public health planning.

Dataset

DATASET	SOURCE
Cancer Incidence	CDC WONDER
Cancer Mortality	CDC WONDER
Survival Data	NPCR

Time Period
1999–2022

Coverage
50 U.S. states

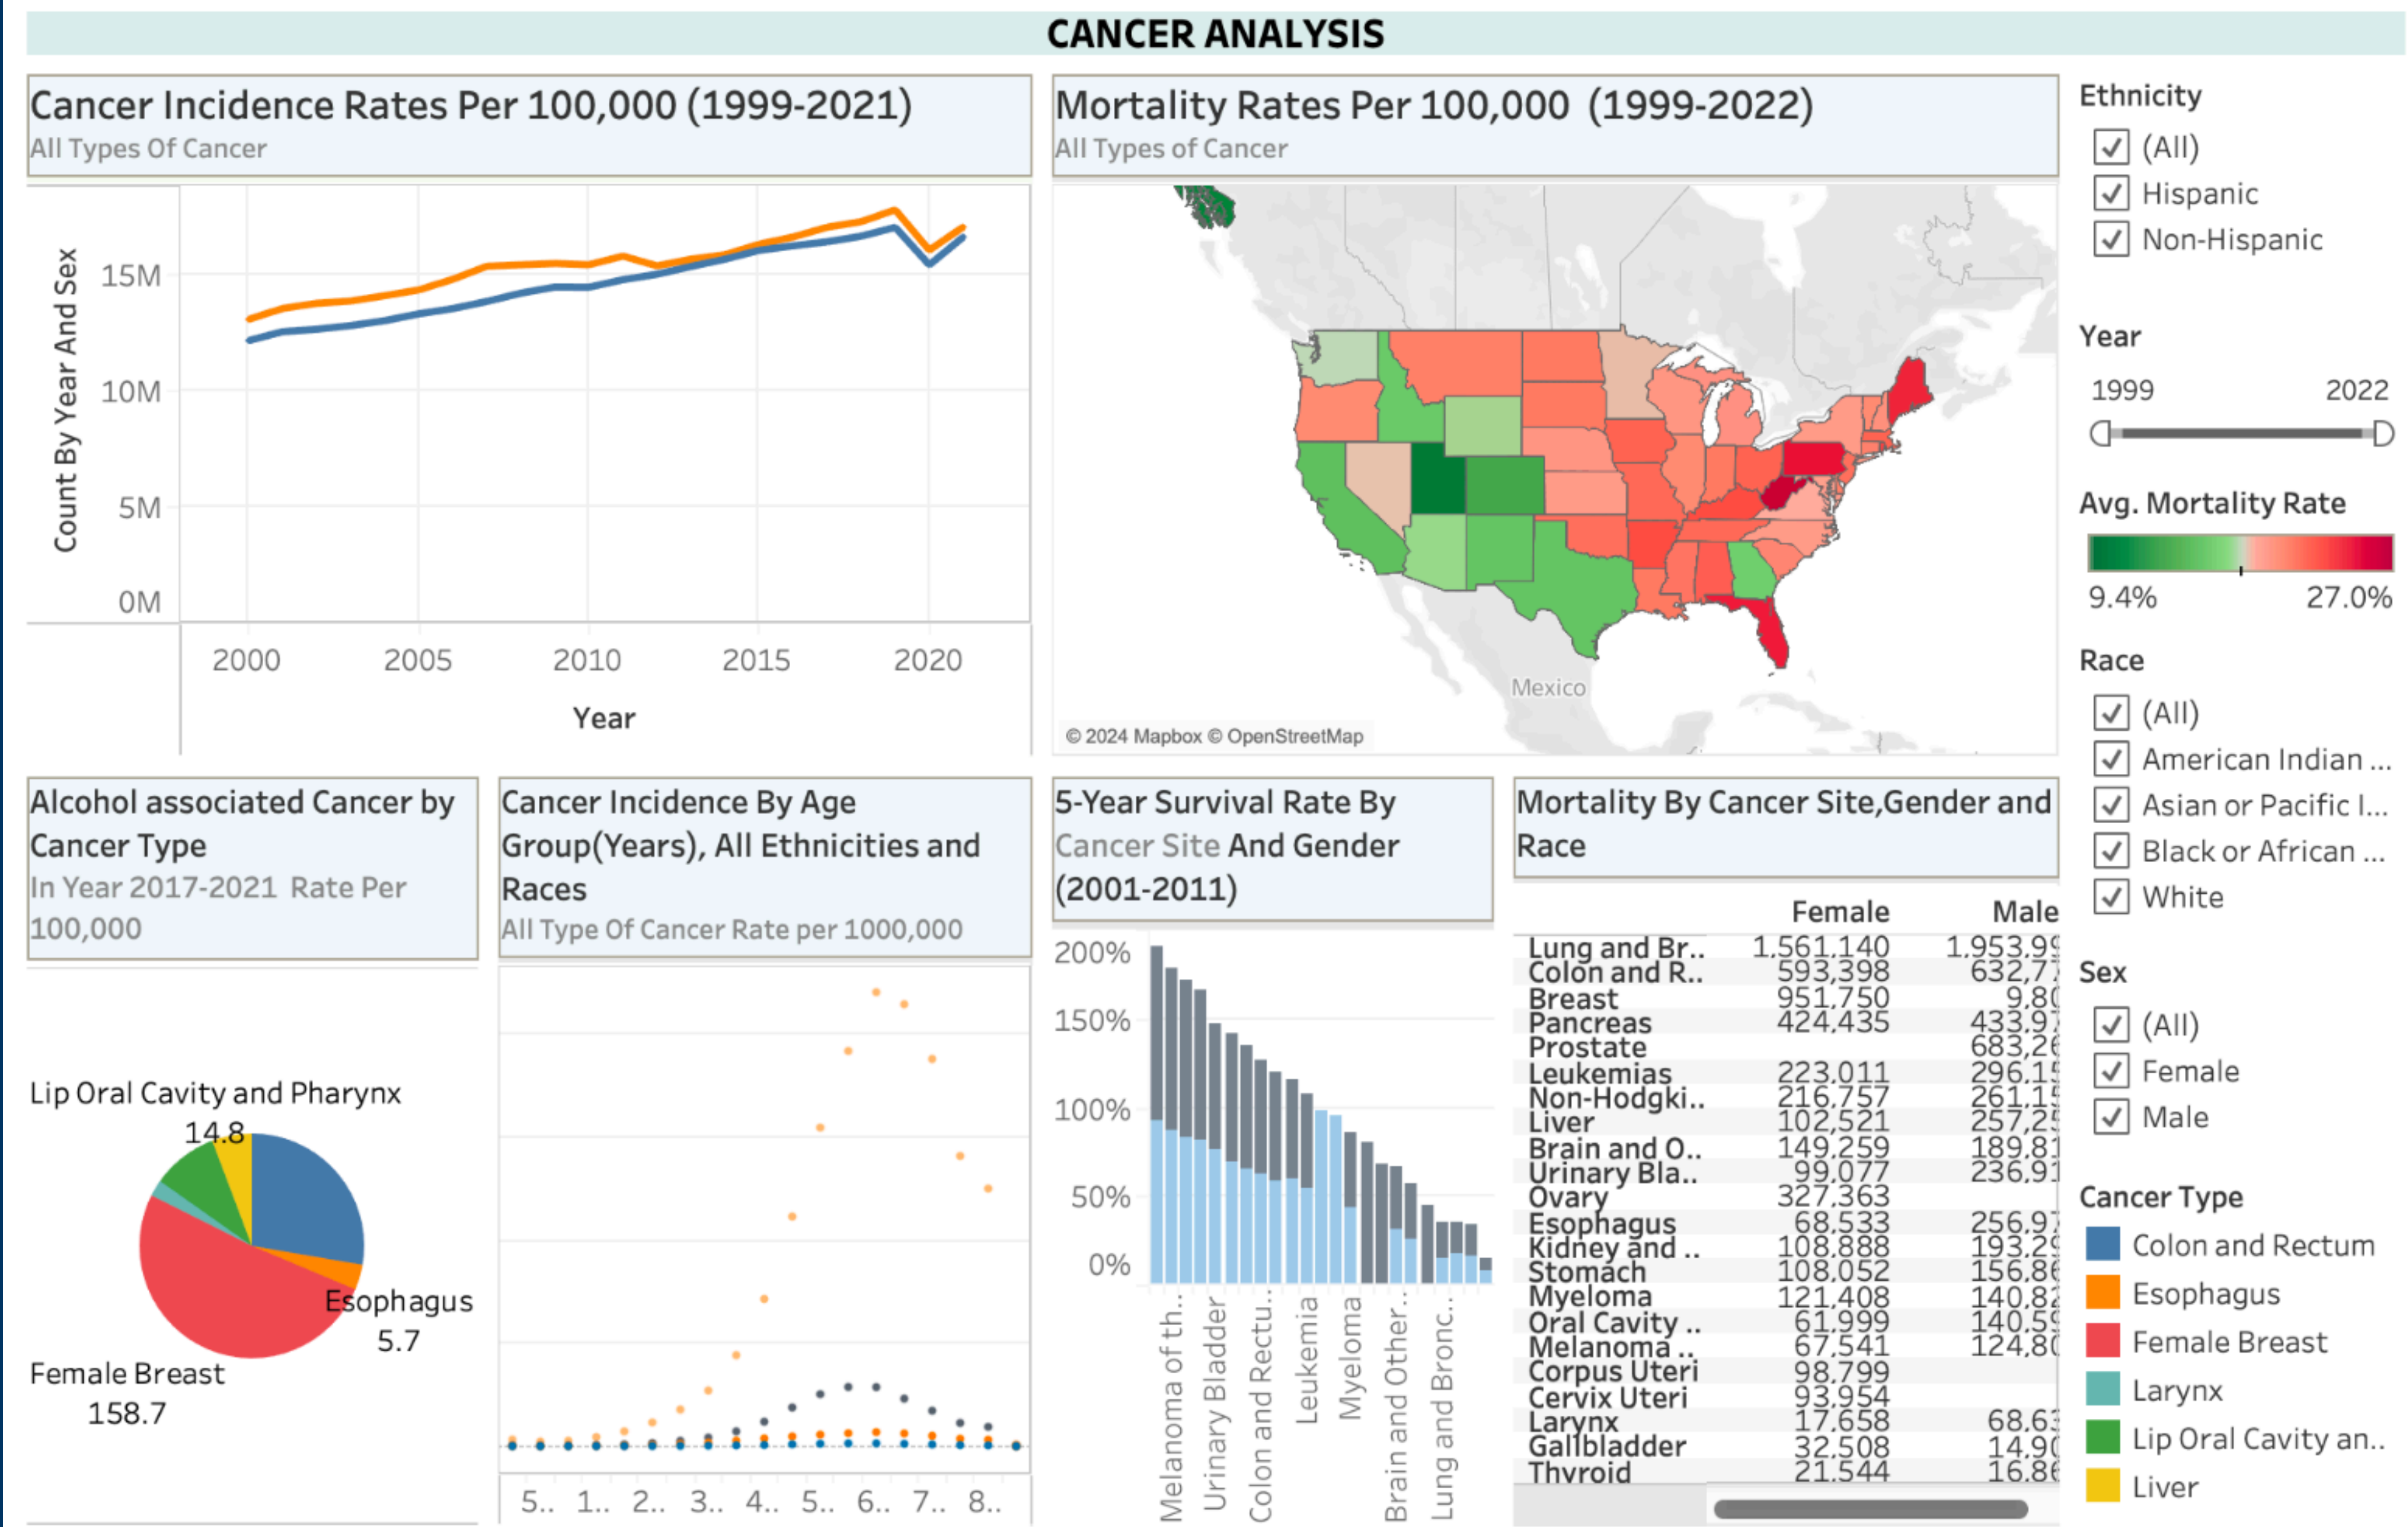

Records
Millions of cancer cases

Dimensions
Age
Gender
Race
Ethnicity
State
Cancer Type

Cancer Analytics Dashboard

Dashboard Features

- Line Chart
- Map
- Table
- Bubble Chart
- Stacked Bar
- Pie Chart

Key Insights

- Cancer incidence increased steadily over time.
- Certain states consistently reported higher mortality rates.
- Survival rates differed substantially by cancer type.
- Older age groups experienced significantly higher incidence.
- Lung and bronchus cancer showed the highest mortality.
- Alcohol-associated cancers represented a measurable public health burden.
